

Web Design Foundations

Brief Overview

This note covers **Web Design** and was created from an [uploaded document](#). It outlines the **four pillars** of design, offers practice resources, details a Canva workflow, and explains how to publish a simple scrollable web page.

Key Points

- Learn the **four pillars**: color theory, typography, UI design, and UX design.
 - Practice daily with platforms like Daily UI and Collect UI for inspiration.
 - Build a **three-page site** in Canva using custom dimensions and alignment grids.
 - Publish the design as a scrollable web page, noting its limitations (no mobile optimization, no custom code).
-

Four Pillars of Web Design

- **Color Theory** – choosing harmonious palettes (e.g., greens, turquoise, blue, white).
- **Typography** – pairing **serif** for headings with **sans-serif** for body/subtitles to create contrast.
- **User Interface (UI) Design** – arranging visual elements (shapes, images, alignment grids).
- **User Experience (UX) Design** – guiding the user flow across three pages (title, features, contact).

The “four pillars” provide a checklist to ensure a design is visually appealing, readable, functional, and enjoyable.

Design Practice Resources

- **Daily UI** – free 100-day design challenge; sign up to receive a new task each day.
- **Collect UI** – curated gallery of designers’ responses to Daily UI prompts; useful for inspiration (e.g., sign-up screens, flight booking, hotel booking).

Repeated practice on these platforms strengthens design intuition and speed.

Canva Workflow Overview

1. **Create a new design** – custom dimensions **1400px × 800px** (desktop viewport).
2. **Structure** – design three vertical sections that will appear as consecutive scroll pages.

Canva's drag-and-drop interface automatically shows alignment grids, helping maintain consistent spacing.

Title Screen Design

Background & Texture

- Select a free template for a base pattern.
- Replace solid color with a **beach photo**; stretch to cover all edges.

Decorative Shapes

- Add a **circle** and a **square**; align the square's edge with the circle's center.
- Change shape color to **white** to create a clean border.

Typography

- **Heading**: use **serif** typeface **Cardo**, set to **all caps**, large size (≈ 120 pt), increase letter-spacing for an “authoritative” feel.
- **Subheading**: use **sans-serif** **Glacial Indifference**, white color, left-aligned.

Alignment

- Utilize Canva's automatic alignment grids to ensure the heading, subheading, and shapes are perfectly aligned.
-

Feature Page Design

Image Preparation

- Import three photos: **bedroom**, **breakfast**, **pool**.

- Crop the pool image to match the width of the other two.
- Resize all images to identical dimensions; line them up using the grid (left edge, right edge, center).

Framing & Color

- Add a **circle** around each square image; apply a subtle background color for a modern frame.
- Duplicate the framed element for consistency across all three images.

Text Elements

- **Feature titles** (“Beautiful Food”, “Beautiful Rooms”, “Beautiful Pool”): left-aligned, **Glacial Indifference**, font size ≈ 18 pt, increased letter spacing.
- **Body text**: generate placeholder Lorem Ipsum; reduce to a concise paragraph, set color to **dark gray** for visual hierarchy.

Hierarchy & Layout

Element	Visual Weight	Reason
Heading (hotel name)	Highest	Establishes brand identity
Feature images	High	Users scan images first
Feature titles	Medium	Highlights key offerings
Body text	Low	Provides supporting detail

Consistent alignment and spacing create a tight, professional appearance.

Contact Page Design

Background

- Search for a **tropical, contemporary** image (e.g., pineapple); position so only the lower portion shows.

Heading & Shape

- Add the word **“Stay”**; scale down to fit the page height.

- Insert a **hexagon** shape, color it **white**, and place it near the heading for geometric consistency.

Contact Details

- Include **mailing address, email, phone number**; align right-justified with the “Stay” heading.
- Adjust line spacing and element size to fit comfortably within the hexagon.

Flexibility in moving and resizing elements is essential; rules can be adapted to achieve visual balance.

Publishing the Design

- Click **Publish → Website → Standard** to generate a scrollable web page.
- The three Canva pages become a single web page with a navigation bar.

Limitations: no mobile optimization, no custom code, no JavaScript functionality. The output serves as a high-fidelity prototype for rapid sharing and feedback.
